

OP510

Fiber Optic Power Meter

Overview Fiber Optic Power Meter Module

The **OP510** was designed as a cost effective solution for measuring, monitoring and logging of insertion loss or power fluctuations. The **OP510** is a small (4"x2"x1.25") portable module designed to minimize movement and bending of the reference and test cables. This results in stable, accurate and repeatable measurements.

A unique feature of the **OP510** is the 16 position bar graph. The display will show an approximate absolute power or relative power after referencing with the test button.

The **OP510** is offered with a choice of 1mm or 3mm InGaAs, 2mm High Power InGaAs, or 3mm Silicon detectors. It can be used with a universal adapter system or fixed optical interface to cover a wide variety of applications.

The USB-powered module connects directly to the computer. OptoTest provides drivers and applications that allow the user to perform common measurement tasks such as EXCEL compatible data logging or time-stamped stability measurements.

Model OP510 Fiber Optic Power Meter

Features

- Pass/Fail display with user-defined criteria
- Broad wavelength spectrum
 - InGaAs: 830nm to 1700nm
 - Silicon: 400nm to 1100nm
- Measurement range
 - InGaAs: +6dBm to -72dBm
 - Silicon: +3dBm to -65dBm
- Relative accuracy of 0.02dB*
- Measurement display resolution down to 0.001dB
- Variable sampling rate via software
- Integrated temperature monitoring eliminates the need for an additional temperature sensor during long term stability tests

* Loss less than 10dB

USB-powered and controlled

Applications

Stability and Long Term Loss Characteristic of Optical Components

Bundled with the **OPL-5** Optical Power Meter Software, the **OP510** is a cost-effective system for measuring the stability of passive fiber optic components and optical sources. The **OP510** measures and reports ambient temperature eliminating the need for an external monitor.

Production Testing of Connectors and Components

The **OP510** offers a cost effective solution in a production environment for insertion loss testing. The module offers a programmable Pass/Fail indicator showing the result of the IL measurement to the user instantly.

Laser Classifications

All **OP930 Insertion Loss and Return Loss Test Sets** utilize a **Class I Laser Source**. Unless otherwise noted, all **OP250**, **OP715**, and **OP750** source units with internal laser sources utilize a **Class I Laser Source**. Unless otherwise noted, all **OP815** and **OP850 Insertion Loss Test Sets** with internal laser sources utilize a **Class I Laser source**. All **OP280 Visual Fault Finder** units utilize a **Class III Laser Source**.

OptoTest strongly suggests that all necessary precautions be taken whenever any Class I or Class III laser source is used.

Specifications are subject to change, please confirm specific performance characteristics of the product at the time of ordering. All specifications are valid within temperature range of 18°C to 24°C unless otherwise noted. For additional specifications please contact OptoTest.
